About this report

Destination management planning requires real-time and actionable insights to inform strategy and measure success. This includes understanding visitors and how a destination delivers on visitor needs and expectations. Triptech data is collected from real-time passenger movements and actions which reflects actual visitation. When compared to tourism surveys and studies, the TripTech Destination Management Report equips tourism businesses with a monthly data-driven view of specialised passenger movement dashboards. The following pages include a breakdown of each in detail.

About TripTech

TripTech (a THL & Jayco, Inc. Company) is a travel technology company operating across Australia and New Zealand. Our apps include CamperMate and custom branded travel apps in multiple categories. These assets connect businesses to travellers to plan and book in-trip and the data generated enables comprehensive, real-time dashboards and reports on tourist movement. This powerful combination arms national and state tourism offices, local and regional councils, government, media agencies and brands with access to new audiences and real-time data on their travel patterns and behaviour.

At TripTech we've been analysing the travel movements of the independent traveller through our network of apps for 10+ years. This enables us to provide a unique perspective on travel prior to, and throughout the course of the pandemic, including what the domestic audience is searching for, where they are going, and in-trip travel behaviours.
